

What are the symptoms of COVID-19? Many patients with COVID-19 have developed symptoms of acute respiratory illness (e.g., cough, dyspnea), although some individuals have only mild symptoms or no symptoms at all. The information available to characterize the clinical illness associated with COVID-19, when present, symptoms include cough, shortness of breath or dyspnea, fever, chills, myalgia, sore throat, new loss of taste or smell, vomiting or diarrhea. Signs and symptoms can appear any time from 2 to 14 days after exposure and the median time to symptom onset is 5 days. For further information on the symptoms of COVID-19 please see the link provided in the "Where can I go for updates and more information?" section at the end of this document.

Public health officials have identified cases of COVID-19 infection throughout the world, including in the United States. Please check the CDC COVID-19 link provided in "Where can I go for updates and more information?" section at the end of this document.

COVID -

FACT SHEET FOR

Report Adverse events, including problems with test performance or results, to MedWatch by submitting the online FDA Form 3500 (<https://www.accessdata.fda.gov/scripts/medwatch/index.cfm?action=reporting.home>) or by calling 1-800-FDA-1088
